REVIEW OF EMPLOYMENT AND PAYROLLS 1964

(As reported by establishments employing 15 or more persons)

Published by Authority of The Minister of Trade and Commerce

January 1966 8003-506

Price: \$1.00

EMPLOYMENT AND EARNINGS REPORTS

Following are other publications of the Labour Division based upon establishment data in the field of industrial employment, earnings and hours:

- 72-001 Advance Statement on Employment and Weekly Earnings Monthly Price \$1.00 per year (index numbers of employment and averages of weekly wage and salary statistics for Canada (major industrial divisions) and the provinces (industrial composite figures))
- 72-002 Employment and Payrolls Monthly Price \$3.00 per year (industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material)
- 72-003 Man-Hours and Hourly Earnings Monthly Price \$3.00 per year (industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material)
- 72-005 Estimates of Labour Income Monthly Price \$2.00 per year (monthly or quarterly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1953)
- 72-006 Hiring and Separation Rates in Certain Industries Semi-Annual Price \$1.00 per year (data for establishments having one or more employees covered by unemployment insurance and employing ten or more persons; also all units of chain or multiple firms, with at least one insured employee, regardless of number employed)
- 72-008 Estimates of Employees by Province and Industry Monthly Price \$1,00 per year (estimates of total numbers of employees, with comparisons with a month and a year earlier)
- 72-201 Review of Employment and Payrolls Annual Price \$1.00 (industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material)
- 72-202 Review of Man-Hours and Hourly Earnings Annual Price 75 cents (industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material)
- 72-203 Earnings and Hours of Work in Manufacturing Annual Preliminary Report Price 25 cents (separate figures of earnings and hours for men and women and for wage-earners and salaried employees in one week in autumn for major manufacturing industries, Canada, and manufacturing in provinces and larger metropolitan areas)
- 72 204 Earnings and Hours of Work in Manufacturing Annual Final Report Price 75 cents (separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in autumn from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years:
- 72-502 Labour Income. 1926-58-Price 75 cents (a complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts)
- 72-503 Estimates of Employees by Province and Industry, 1961-64-Price 50 cents (estimates of total numbers of employees, monthly and annually, for major industrial divi-Sions, Canada and provinces; contains a review of concepts, sources and methods and indicators of sampling variability)

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution Unit, Financial Control Section, Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa, Canada.

| 1. | Methods and Scope of Monthly Surveys of Employment and Payrolls | 6 |
| | | |
| | es | 6 |

The industrial composite annual average index of employment (1949=100) for 1964 was 130.4. This figure was 4.7 p.c. above the average for 1963 and surpassed the previous high of 122.6 recorded for 1957. The increase in 1964 was the largest since the 6.9 p.c. recorded from 1955 to 1956 and was the third largest recorded in the past 15 years.

All major industrial divisions shared in the employment gains, with forestry, trade and service each advancing at a greater rate than the composite. The percentage advance in manufacturing exactly equalled that for the industrial composite and resulted mainly from an increase of 6.2 p.c. in the durables component,

Of particular note in 1964 was the rise in goodsproducing industrial divisions other than manufacturing. In this connection, forestry rose 4.9 p.c., mining 1.0 p.c. and construction 4.2 p.c. For the forestry division the latest advance followed three successive year-to-year reductions, while for mining it followed six. Since 1961, construction has shown more strength than forestry and mining. From 1961 to 1964 average employment in the division rose 6.2 p.c. while in forestry it advanced only 2.1 p.c. and in mining it declined 0.9 p.c.

Women continued to increase their share of industrial employment in 1964 as the annual average index of employment for females rose 5.4 p.c. to 139.9 compared to an increase for males of 4.3 p.c. to 125.5. The increased participation by women in the labor market was reflected in the continued rapid growth of the trade and service divisions as well as those manufacturing industries which employ relatively large numbers of women.

All regions reported higher levels of employment. The gains were fairly evenly distributed, ranging from 3.7 p.c. in the Prairie Region to 4.9 p.c. in Ontario. Provincially, there was much more variation with the gains ranging from 2.9 p.c. in Manitoba to 5.4 p.c. in Newfoundland.

The industrial composite of average weekly wages and salaries rose by 3.9 p.c. in 1964 to \$86.68. The increase reflected higher earnings in all major industrial divisions with percentage increases of more than 5.0 p.c. in forestry, construction and finance, insurance and real estate. Earnings were up in all provinces, the gains ranging from 1.9 p.c. in Manitoba to 4.4 p.c. in British Columbia. The industrial composite annual average index of payrolls, at 265.2, was up 8.7 p.c. from the 1963 figure of 243.9.

EMPLOYMENT - 1963 - 1964 AVERAGES

Goods-producing Industries

Manufacturing Industries

The annual average index of employment in manufacturing rose 4.7 p.c. in 1964 further advancing the record level reached in 1963. The latest gain resulted from an increase in durables of 6.2 p.c. and in non-durables of 3.4 p.c. The relatively large rise in durables resulted from substantial increases in all component industries with iron and steel and transportation equipment recording gains of 6.6 p.c. and 9.8 p.c., respectively.

In non-durables, all component industries rose over the year except tobacco products and printing, publishing and allied industries. There were increases of over 6.0 p.c. in rubber products, textile products and miscellaneous manufacturing industries, while clothing and paper products rose by 4.9 p.c. and 3.8 p.c., respectively. In tobacco products employment declined 2.4 p.c. related to reduced demand for tobacco products. In printing, publishing and allied industries, employment levels were depressed in 1964 by prolonged industrial disputes affecting several large printing establishments.

Other Goods-producing Industrial Divisions

Average employment levels advanced in 1964 in forestry (4.9 p.c.), mining (1.0 p.c.) and construction (4.2 p.c.). For the first two named divisions, the increases ran counter to a series of successive

year-to-year decreases that began in 1961 for forestry and in 1959 for mining. The strengthening in forestry resulted from advances in the Atlantic Region and Quebec of 19.5 p.c. and 5.4 p.c., respectively; reductions in these regions from 1960 to 1963 accounted for the overall decline in the division during that period. The increase in mining reflected an upsurge in iron and other non precious metals of 5.9 p.c. and 4.0 p.c., respectively. These gains were offset to a large degree by reductions in gold (4.8 p.c.) and coal (6.2 p.c.).

The advance in **construction** raised the division to 129.2, its highest employment level since 1959 when it averaged 130.3. The latest increase reflected an increase of 7.0 p.c. in the building component.

Service-producing Industries

In the service-producing industrial divisions, advances in trade, service and in finance, insurance and real estate continued the almost uninterrupted series of year-to-year increases evident since the end of World War II. The only exception was a small decline between 1957 and 1958, in trade. Since the current expansion in aggregate economic activity got underway in 1961, employment growth in trade, in finance, insurance and real estate and in service has been outstanding. For the last named industry, the percentage increase over 1960 was 28.9 p.c., almost three times the advance of the industrial composite over the same period.

EMPLOYMENT BY SEX

The industrial composite annual average index for females rose 5.4 p.c. from 1963 to 1964 to 139.9 while the index for males rose 4.3 p.c. to 127.5. Thus women increased their share of industrial employment from 24.3 to 24.4. The proportion of women

in industrial employment has now risen in every year since 1959. In manufacturing, the relative increase in average indexes for males and females was 4.6 p.c. and 5.1 p.c., respectively. However, the relatively larger increase in the index for females was not

enough to change the overall ratio of women employed in the division and this share remained unchanged at 23.1 for the third consecutive year. Since the remaining goods-producing industrial divisions employ small numbers of women it follows that the rising percentage of females is associated with the major growth of the service section which employs relatively high proportions of women.

Regions

Every region showed higher levels of employment in 1964. The gains were fairly evenly distributed ranging from 3.7 p.c. in the Prairie Region to 4.9 p.c. in Ontario.

In the Atlantic Region, average employment rose 4.0 p.c. All major industrial divisions contributed to the advance, led by forestry (19.5 p.c.) and service (14.9 p.c.).

In Quebec, employment advanced 4.7 p.c. as increases of over 5.0 p.c. were reported in forestry, construction, trade, service and in finance insurance and real estate.

Ontario led all regions with an employment advance of 4.9 p.c. In this region, employment rose markedly in manufacturing (5.8 p.c.), trade (5.5 p.c.) and service (9.6 p.c.). The large advance in manufacturing was a major contributing factor to the strength in the province and reflected substantial gains in the durables' industries, particularly transportation equipment.

The average index of employment for the **Prairie Region** rose 3.7 p.c. in 1964. All major industrial divisions advanced in the region with the largest gains being recorded in trade, finance, insurance and real estate and service.

Average employment levels rose 4.6 p.c. in **British Columbia** due mainly to advance in construction (7.6 p.c.), public utility operation (9.9 p.c.), trade (5.7 p.c.), finance, insurance and real estate (5.4 p.c.) and service (14.2 p.c.). However, sluggish movements in the manufacturing division, where employment rose by only 1.8 p.c., dampened the overall advance.

CYCLICAL MOVEMENTS IN EMPLOYMENT IN 1964

Trends in the Industrial Composite and Major Industrial Divisions

Although the increase in the industrial composite annual average index of employment indicated that 1964 was a year of marked advancement, the monthly course of industrial employment—after allowance for seasonal variation—was much more varied. This was particularly true in mining, manufacturing and construction which reported a slowdown or decline in the first half of the year but marked advances in the second half. In general, the service-producing industries reported steady gains in 1964, which accounted for the relatively larger increases in the annual averages of most of these industries.

The seasonally-adjusted industrial composite index of employment (1949 = 100) rose markedly in 1964 so that at the end of December the adjusted index, at 133.1, was 4.7 p.c. above the December 1963 figure of 127.1. As a result of the substantial gains in 1964, the composite greatly outstripped the previous cyclical high of 123.8 recorded in March 1957.

Although, on the whole, 1964 was a year of marked growth, the rate of advance of the composite slackened considerably between February and June. Thus, in February, the adjusted index stood at 128.7 and by June had advanced 0.8 p.c. to 129.7. After June the rate of advance picked up considerably and the index rose 2.6 p.c. by December.

In general, the February to June slackening resulted from a contraction in construction and a slow down in manufacturing. The adjusted index for construction declined 0.7 p.c. between February and June but advanced 5.0 p.c. from June to December. Manufacturing rose only 0.7 p.c. over the first half of 1964 but increased by 3.1 p.c. over the latter period. The factors originating the trends in the two industries were not unrelated, reflecting to some

extent a shifting in seasonal activity in the construction industry. Thus, the rapid expansion experienced in the last half of 1963, while due for the most part to a wide spread cyclical rise in demand, also reflected stockpiling of building materials by construction firms in anticipation of the institution of the second stages of the sales tax and to various government incentives calculated to shift some summer construction to the winter months. As a result, the month-to-month requirements in the spring of 1964 were below average. This weakening was amplified by the incidence of major industrial disputes in manufacturing,

After June, employment picked up sharply in manufacturing and construction in response to demand conditions in many respects similar to those prevalent in the second half of 1963. In addition, there was increased activity in export industries following tax cuts in the United States.

In forestry, the trends apparent in most goods-producing industrial divisions for 1964 were reversed. Between February and June the index rose 4.3 p.c. to 75.4. After June, the index plunged 9.7 p.c. to 68.1. There is some evidence to indicate that the experience of the forestry division in 1964 reflects, to a large degree, changing seasonal patterns in Eastern Canada. Specifically, the amplitude of seasonality in this industry in Eastern Canada has been sharply reduced. The more important factors accounting for this are increased accessibility to the lumbering areas made possible by the construction of more and better roads, and increased mechanization implying a smaller work-force on a year round basis.

Except for a sharp drop in March, the adjusted index for mining fluctuated at about 115.5 during the first six months of 1964. During the second half of 1964 it advanced shakily, and by December it was 1.6 p.c. above June.

All the service-producing industrial divisions except transportation, storage and communication rose steadily in 1964. The last named industry was virtually unchanged over the first half of the year at about 110.9. Between June and December the index advanced 1.1 p.c. to 112.2.

Trends in Manufacturing

The seasonally-adjusted index for manufacturing continued, in 1964, the growth that has been characteristic of that division since the current expansionary phase began in the spring of 1961. Between December 1963 and 1964, the seasonally-adjusted index rose 5.0 p.c. to 124.9. This advance resulted from increases of 6.9 p.c. in durables and 3.2 p.c. in non-durables. The two components showed similar movements in 1964; each indicated a slow-down in the rate of expansion between February and June then advanced more rapidly between June and December. However, the overall trend was dominated by the more volatile durables component.

From February to June 1964 the seasonally-adjusted index for durable goods manufacturing increased only 1.0 p.c. After the pick-up in June, employment rose 4.4 p.c. over the remainder of the year.

All components of durables increased during the year. Measures of year-to-year percentage increases in the annual average indexes of employment indicate that all components recorded percentage increases of 4.0 p.c. or more with the largest gains being recorded in iron and steel (6.6 p.c.) and transportation equipment (9.8 p.c.).

The slow-down in the first half of 1964 was more pronounced in industries closely related to the construction industry. If allowance is made for seasonal factors, employment in wood products declined from February to June while non-metallic mineral products levelled out. The contraction in wood products was accentuated by the incidence of major industrial disputes in British Columbia. After June, both industries rose markedly with the result that, on the average, employment levels in 1964 were at least 4.0 p.c. above 1963.

In the remaining durables industries, iron and steel products reported marked gains throughout 1964 except for some hesitation in the second quarter due to weakening in construction-oriented industries. Transportation equipment rose at an accelerated rate throughout 1964; the only setbacks occurred in July, following unusually heavy layoffs for model changeover, and in October due to major industrial disputes in supply industries in the United States. A contraction in non-ferrous metals in the third quarter was due, in part, to industrial disputes in nickel refining; however, as elsewhere, the industry advanced markedly over the remainder of 1964. A levelling in electrical apparatus and supplies in the first half of 1964 reflected weakening in telecommunication equipment. This component picked up in the second half, and accompanied by continued steady advances in heavy electrical equipment. pushed average employment levels in the industry group to 160.9, 4.0 p.c. above 1963.

In iron and steel, the slackening in the second quarter was a result of a contraction in construction-oriented industries such as heating and cooking appliances, iron castings and sheet metal products; however, in each case employment expanded markedly in the second half of 1964. Employment in fabricated and structural steel, machinery and primary iron and steel did not appear to be influenced by the second quarter decline in construction. In any event, what effects may have occurred were not reflected in average employment levels and these industries were higher than 1963 by 7.4p.c., 7.1p.c. and 9.3 p.c., respectively.

The strong advance in transportation equipment resulted, primarily, from expansion in the automobile industries. In 1964, partly in response to replacement buying and to a generally buoyant demand resulting from rapidly rising incomes, automobile sales increased sharply. Since levels of production in the industry are closely linked to sales levels, production and hence demand for labour was greatly stimulated. As a result of the overall expansion, average employment levels in 1964 were up 13.6 p.c. in motor vehicles and 17.9 p.c. in motor vehicle parts and accessories.

Elsewhere in the transportation equipment group, average employment was up 9.3 p.c. and 10.1 p.c. in aircraft and parts and railroad and rolling stock equipment, respectively. Shipbuilding and repairing continued in the first half of 1964 a contraction that began in the first quarter of 1963. The overall situation was worsened by the occurrence of a major industrial dispute in British Columbia in early 1964. There was some pick-up later in the year but not nearly enough to offset the earlier losses so that for the year as a whole, the industry showed a drop of 4.8 p.c.

Regional Employment

Employment continued to expand in all regions in 1964, with Ontario showing the most marked gains. Comparison of the seasonally-adjusted indexes for December 1963 with those for December 1964 reveal that the Atlantic Region was up 3.3p.c., Quebec 4.7 p.c., Ontario 5.3 p.c., the Prairie Region 3.5 p.c. and British Columbia 4.3 p.c. The slow-down noted in the Canada industrial composite between February and June was reflected regionally in the adjusted composites for the Atlantic Region, Prairie Region and British Columbia.

In the Atlantic Region, employment in 1964 expanded fairly steadily in all the service-producing industrial divisions except transportation, storage and communication. In the last named division, the weakening followed a marked advance in the 4th quarter of 1963 and the first quarter of 1964. In the goods-producing divisions, employment contracted over the first half in mining, construction and manufacturing but expanded in these same divisions in the second half. In forestry, partly for reasons noted in earlier sections, this trend was reversed.

The seasonally-adjusted industrial composite for **Quebec** continued in the first quarter of 1964 the marked advance which began in the second half of 1963; over the remainder of the year, however, it advanced at a reduced rate. The expansion in the fourth quarter of 1963 and first quarter of 1964 resulted from strengthening in manufacturing and construction in addition to continued gains in trade, service and in finance, insurance and real estate. Forestry, for reasons noted earlier, expanded in the first half but contracted in the second. Over the last half of 1964, all divisions strengthened except forestry and construction.

Most manufacturing industries in **Quebec** did reasonably well in 1964, particularly iron and steel, transportation equipment, non-ferrous metals and non-metallic mineral products. The only weakening of note occurred in leather products, printing, publishing and allied industries and electrical apparatus and supplies,

The seasonally-adjusted index for Ontario showed a strong, steady rise throughout 1964. In this region, the main source of strength was in manufacturing amply supported by steady gains in trade, finance, insurance and real estate and service. In manufacturing, the strength was mainly in durables where a major expansion in the automobile industries stimulated production not only in other durables' industry groups, such as iron and steel and electrical apparatus and supplies, but also in non-durables' industry groups, such as rubber and textiles. Also of major importance was a marked rise in construction in 1964, a factor which further stimulated the building materials industries in manufacturing and the business service industry. Offsetting these gains somewhat were contractions in forestry and mining, the latter due primarily to the continued decline in employment in gold mining.

In the **Prairie Region**, the seasonally-adjusted index tended to decline in the first half of the year; in the second half, employment expanded vigorously. The weakening in the first half was due, for the most part, to movements in manufacturing and construction and, to a lesser extent, in mining and transportation, storage and communication. Each of these divisions except mining showed substantial improvement over the second half of 1964, the expansion in manufacturing emanating from strengthening in clothing, iron and steel, non-metallic mineral and chemical products. As elsewhere, the region showed a steady growth in trade, finance, insurance and real estate and service.

The movement of the seasonally-adjusted index for British Columbia was dictated by trends in the goods-producing section. As in most other regions, employment contracted in the first half but expanded markedly in the second. Also typical was the weakening in manufacturing and construction in the first half and strengthening in the second, and the substantial increases in trade, finance, insurance and real estate and service.

Within manufacturing, however, there were more marked differences. Except for iron and steel, which advanced more strongly in British Columbia than elsewhere, the durables component fared badly. The rate of advance in the wood products industry was greatly reduced in 1964, while non-ferrous metals and transportation equipment weakened considerably; in the last named industry, this situation was further depressed by a major industrial dispute in the shipbuilding industry. On the other hand, in non-durables, advances in paper products in the region were substantially higher than elsewhere.

AVERAGE WEEKLY WAGES AND SALARIES

The industrial composite of average weekly wages and salaries was \$86.68 in 1964, up 3.9 p.c. from the 1963 figures of \$83.43. In percentage terms, the increase was the largest recorded since the 4.3 p.c. recorded from 1958 to 1959.

Among the major industrial divisions, increases were largest in forestry (6.2 p.c.), construction (5.2 p.c.) and finance, insurance and real estate (5.5 p.c.). A rise of 4.0 p.c. in manufacturing resulted from similar advances in the two major components.

Per capita earnings rose in all provinces. Three provinces — New Brunswick, Quebec and British Columbia — reported advances of over 4 p.c. Manitoba, Prince Edward Island and Saskatchewan showed the smallest gains among the provinces. Manitoba was least improved, advancing by only 1.9 p.c. Increases in Prince Edward Island and Saskatchewan were somewhat larger than in Manitoba but were none-the-less considerably below the national average.

Methods and Scope of Monthly Surveys of Employment and Payrolls

General. - The monthly surveys of employment and weekly payrolls relate to all branches of the following industrial divisions: forestry, mining, manufacturing, transportation, storage and communication, construction, public utility, trade, finance, insurance and real estate, and to certain groups of the service industry, mainly hotels, restaurants, laundries and dry cleaning plants, recreational and business services. The surveys do not cover firms usually employing less than 15 persons, of which the number is very large in relation to their employment totals. Establishments reducing their staffs below this minimum are not necessarily removed from the mailing list. Data are requested for all classes of employees, irrespective of their functions in the business; statistics for the owners are excluded, Employers operating in two or more lines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their establishments in the different units.

1. Coverage. - Virtual limitation of the surveys to firms with staffs of 15 and over results in a large and relatively even coverage of total employment in the included industries in most of the provinces and in the urban areas. The industrial representation, though large, is more uneven, the proportion of employees covered depending upon the organization of particular industries in larger or smaller units of operation. Complete information respecting the area and industry distributions of the working population is available only when the Decennial Censuses are taken, at place of residence. In 1951, data were not segregated for paid workers actually at work. Estimates of coverage that can be made are therefore conservative because they relate employees of reporting firms to all paid workers with jobs, including those absent from work without pay who would not be included in the monthly statistics of employment and payrolls. Estimates of coverage according to industrial divisions for Canada and the provinces are given in the first columns of Tables 4 and 5 of the monthly reports "Employment and Payrolls".

The following table contains provincial estimates of coverage of total wage-earners and salaried employees in all industries, including those in agriculture, government, education, health and other classes excluded from the monthly surveys, as well as paid workers in the industries that are included. The general estimate for Canada was 62 p.c.

It is important to note that the statistics of employees covered, as published in the monthly and annual reports, do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distributions of men and women on the staffs of the co-operating employers in the indicated periods, including their full-time, part-time and casual employees.

Estimated Provincial Coverage of all Paid Workers, June 1, 1951

| Province | p.c. |
|----------------------|------|
| Newfoundland | 47 |
| Prince Edward Island | 24 |
| Nova Scotia | 51 |
| New Brunswick | 50 |
| Quebec | 62 |
| Ontario | 68 |
| Manitoba | 61 |
| Saskatchewan | 39 |
| Alberta | 51 |
| British Columbia | 61 |

2. The Questionnaire used in the monthly surveys asks employers to state the number of wageearners and salaried employees drawing pay in the last pay periods in the months, with their payroll disbursements in the same periods. The request for statistics for the last pay period in the month only is designed to prevent duplication in the employment count where individuals may appear on the payrolls of more than one employer in a period of several weeks. The workers reported are not necessarily employed for a period of a week, by any one establishment or by more than one. Workers on strike during the reported pay periods are not included in the statistics unless they draw pay from their employer; for example, take paid holidays during the dispute. Workers laid off without pay during the pay period as an indirect effect of industrial disputes are not counted as employed.

Employees and earnings are grouped according to the duration of their pay pariods—monthly, semi-monthly, fortnightly, weekly, etc. Gross payrolls are requested before deductions are made for taxes, unemployment insurance contributions, etc. Overtime payments, cost-of-living allowances, commissions, incentive, and production bonuses are included, as are payments for absences with pay in the reported pay periods. The statistics do not include employers' contributions to unemployment insurance, workmen's compensation and other welfare plans, nor do they include amounts paid for pensions, retirement gratuities, bonuses paid at irregular or infrequent intervals, and various other supplementary labour costs.

3. The Processing.—Statistics of wages and salaries reported for any period exceeding a week are reduced for tabulation purposes to one week's proportion of the totals, the numerators of the fractions used for this purpose being 5, 6 or 7 days,

depending upon the number of days per week on which the establishment operated in the pay period; the denominators of the fractions are the numbers of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by variations in the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, irrespective of the length of the calendar month. The sums resulting from these various calculations are then aggregated to give the total amounts which would be paid for services rendered in one week by the employees of the co-operating firms.

- 4. The Tabulation. Data tabulated each month show the numbers of women and of workers of both sexes drawing pay from the establishments furnishing returns and their weekly payrolls, with similar information for employees of the same firms a month earlier, and in the base period (1949). The statistics first published for each month are preliminary; retabulation of the data on the succeeding month's tabulation permits incorporation of revisions in the material originally tabulated and inclusion of returns received too late for the preliminary tabulation.
- 5. The Index Numbers. The index numbers of employment and payrolls represent the percentage relationships between employees of establishments currently furnishing data and their aggregate weekly earnings, and the corresponding 1949 averages of these employees. The 1949 figures of employment and payrolls for firms which have since gone out of business are continued in the basic averages; firms or branches opening for business since 1949 are tabulated with zero base figures. The basic averages of establishments which operated in 1949 but have since been added to the mailing list, are incorporated in the base figures from the date when their cooperation was first obtained. The index numbers of average weekly wages and salaries relate the average earnings of persons employed by the reporting firms at a given date to the average earnings of their employees in 1949.
- 6. The Weekly Wages and Salaries.—The statistics of average weekly earnings result from the division of the aggregate weekly wages and salaries disbursed in the last pay periods in the month by the co-operating establishments, by the number of their

full time and part-time employees in the same periods. The figures represent gross earnings, before deductions are made for unemployment insurance contributions, taxes, etc. In addition to basic wages and salaries, the earnings include overtime payments, shift premiums, commissions, cost-of-living, incentive and production bonuses, and other bonuses paid at frequent intervals. They also include amounts paid employees absent on leave with pay during the reported pay periods, i.e., during vacations, statutory holidays, sick leave, etc.

The earnings do not include the value of free board and lodging and other perquisites, employers' contributions to welfare funds such as workmen's compensation, pension, and unemployment insurance funds and supplementary unemployment benefits. Also excluded are the cost to employers of certain other employee benefits, such as bonuses paid at irregular or infrequent intervals, (e.g., annual bonuses), and retirement gratuities.

The revised figures of earnings in the monthly reports incorporate retroactive pay for one month, corrections in the material originally tabulated, and data received too late for inclusion in the first tabulation; for the most part, such adjustments are not carried back for more than one month.

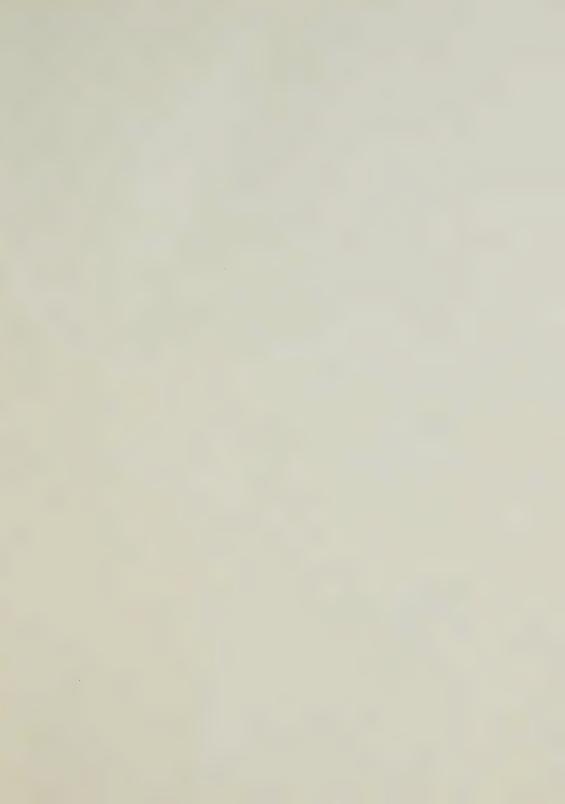

- 7. Hourly Earnings.—Statistics of average hours and average hourly and weekly earnings of wage-earners for whom co-operating employers keep record of hours worked are contained in the monthly reports "Man-Hours and Hourly Earnings".
- 8. Urban Area Statistics.—Statistics given in the present report for communities listed as "metropolitan areas" and "other major urban areas" in Tables 8 and 9 of the 1956 Census Volume 1 (population) and in the same tables in Bulletin 1-6, cover the census areas, except those for St. Catharines, which also include establishments in Port Colborne and Welland, and those for Chicoutimi-Jonquiere which also include Bagotville and Port Alfred, as well as other smaller centres. Statistics given for urban areas not listed in the above mentioned tables cover establishments in the incorporated cities and towns named except for Galt, which include establishments in Preston as well as in Galt.

FOOTNOTES

Most of the footnotes are lists of names of industries that appear in the Standard Industrial Classification Manual which are grouped under special titles in employment and payroll publications. In some industries, the group breakdown shown in the tables is less extensive than in the Standard Industrial Classification; figures for the omitted categories however, are contained in the group totals.

- (a) Gold mining includes alluvial gold mining; auriferous quartz mining.
- (b) Other metal mining includes copper-gold-silver mining; iron mining; nickel-copper mining; silver-cobalt mining; silver-lead-zinc mining; miscellaneous metal mining.
- (c) Non-metal mining includes non-metal mining; quarrying, clay and sand pits.
- (d) Other beverages includes carbonated beverages; wines.
- (f) Other leather products includes leather gloves and mittens; leather tanneries; miscellaneous leather products.
- (g) Saw and planing mills includes plywood and veneer mills; sash, door and planing mills; sawmills.
- (h) Other wood products includes boxes and baskets (wood); morticians' goods; miscellaneous wood products.
- (i) Other paper products includes paper boxes and bags; roofing papers; miscellaneous paper products.
- (j) Machinery manufacturing includes household, office and store machinery; machine tools; machinery, n.e.c.
- (k) Non-metallic mineral products includes abrasive products; asbestos products; cement, hydraulic; clay products; glass and glass products; lime and gypsum products; stone products; concrete products; miscellaneous non-metallic mineral products.
- Other chemical products includes explosives, ammunition and pyrotechnics; fertilizers; paints and varnishes; soaps, washing and cleaning compounds; toilet preparations; vegetable oil mills; primary plastics; miscellaneous chemical and allied products.
- (m) Building includes buildings and structures; special trade contractors. General engineering includes other construction, other than highways, bridges and streets.
- (n) Water transportation includes water transportation; services incidental to water transportation.
- (o) Electric and motor transportation includes bus and coach transportation-interurban; urban and suburban transportation systems; taxicab; truck transportation; services incidental to transportation; other transportation.
- (p) Urban and interurban transportation includes bus and coach transportation-interurban; urban and suburban transportation systems.
- (q) Other public utilities includes gas manufacture and distribution; water and sanitary services; other public utilities.
- (r) Industrial machinery includes machine tools; machinery, n.e.c.
- (s) Synthetic textiles and silk includes synthetic filament yarn and staple fibre; spun yarn and fabric.
- (t) Durable goods manufacturing includes wood, iron and steel, transportation equipment, non-ferrous metal, electrical apparatus and supplies and non-metallic minerals. The non-durable group includes the remaining manufacturing industries.
- (u) Service includes hotels, restaurants, laundries, dry cleaning plants, business, recreational services and miscellaneous services. Government, community and health services are not covered.
- (v) Estimates of coverage are based on comparisons of data for 1951 with Population Census Statistics. For details, see notes on page 70.
- (w) The Northwest Territories with the exception of Baffin Island are included in Alberta, Baffin Island is included in Quebec. The Yukon Territory is included in British Columbia.
